

JUL 2 21965

TOBACCO SITUATION

116

For Release June 30, P.M.

JUNE 1966

The 1966 marketings of flue-cured will be larger than last year. In 1965--first year of the acreage-poundage program--many growers marketed less than their poundage quotas, and under the program they can sell an additional quantity in 1966 to make up last year's under-marketings.

The mid-1966 carryover is down from the peak of a year earlier; substantial sales were made from Government loan stocks during the past year. Total 1966-67 supply may be slightly above 1965-66 but significantly below the 1964-65 record level.

Domestic use of flue-cured in 1965-66 is estimated to be a little lower than a year earlier. Exports also were down, as exporters awaited details of the Government program to increase tobacco exports.

The Government price support level for 1966 flue-cured is nearly 2 percent above 1965.

SUMMARY

Flue-cured tobacco marketings this year may be about one-eighth larger than last year's. The increase will be mainly due to increased marketings by growers who last year fell short of their poundage quotas. Under the acreage-poundage program, first placed into effect in 1965 on flue-cured tobacco, growers can make up for last year's undermarketings by selling that much additional this year. Carryover of flue-cured in mid-1966 is down significantly from the peak of a year earlier. The 1966-67 total supply--carryover plus this year's marketings--may be slightly above 1965-66, but is significantly lower than the 1964-65 record level.

Production of burley tobacco, which continues under the acreage allotment program, seems likely to be moderately below last year. Acreage may be down 13 percent but yields per acre could average higher this year than last. Carryover of burley may be down a bit, and addition of this year's crop probably will result in a total supply for 1966-67 somewhat lower than the high level of recent years.

Domestic use of flue-cured and burley during 1965-66 might turn out to be a little lower than a year earlier, based on partial-year indications. Also, flue-cured tobacco exports in its marketing year which ends June 30 totaled less than in the preceding year, as exporters awaited the details of a Government program designed to increase tobacco exports.

In the year ending June 30, 1966, U. S. cigarette output is estimated at 563 billion--slightly higher than in 1964-65. U. S. smokers consumed an estimated 534 billion cigarettes--about 2 billion more than a year earlier and more than in any previous fiscal

or calendar year. Exports of cigarettes were about 24 billion, down a little from 1964-65, and shipments to Puerto Rico were near 4 billion, largely accounting for the rest of 1965-66 output.

Cigars and cigarillos smoked by U. S. smokers in the year ending June 30, 1966, may have approximated 8.6 billion--about 300 million fewer than in 1964-65, but about 335 million more than in 1963-64. According to a survey of the Cigar Manufacturers Association of America, sales of cigarillo-size cigars in calendar 1965 accounted for about 26½ percent of total sales of cigarillo- and regular-size cigars. This was nearly double the proportion of 5 years ago.

The 1965-66 output of smoking tobacco, estimated at near 71 million pounds, is about 3 million below 1964-65 and about 9¾ million below 1963-64. The 1965-66 output of chewing tobacco, estimated at close to 65 million pounds, is almost the same as in 1964-65 but about 1¼ million below 1963-64. The 1965-66 output of snuff, at near 30 million pounds, is only a little below a year earlier but almost 2 million below 2 years earlier.

For many years, tobacco has ranked among the 5 most important agricultural export commodities of the United States. On the average, export markets have taken about a fourth of the tobacco produced in the United States. In the year ending June 30, 1966, U. S. exports of tobacco are estimated at 465 million pounds (declared weight)--about 20 million below 1964-65, which was down nearly 50 million from 1963-64. Though still the world's leading producer and exporter of tobacco, the United States has not shared in the increasing world tobacco trade. As recently as 1955-59, the United States share in free-world trade in tobacco was 35 percent, but by 1963 it had declined to 30 percent and by 1965 it was down to 26 percent.

On June 10, the U. S. Department of Agriculture announced a broadened program to regain and expand foreign markets for U. S. tobacco. Export payments of 5 cents per pound will be applicable to all crops (including tobacco remaining from prior years) for the kinds of tobacco on which Government price support is offered for the 1966 crop. The payments are in addition to the rebates and payments on selected crops of previous years announced earlier this year.

The unresolved situation of Rhodesia--a leading exporter of tobacco--continues to create uncertainty in world tobacco markets.

Auction markets for the 1965 crop of Maryland tobacco opened April 12 and are scheduled to close July 1. Through June 22, prices averaged 66.1 cents per pound compared with 62.4 cents a year earlier. This year's production might be less than last year when yields per acre were record-high. An increase in carryover, however, seems likely to raise the total 1966-67 supply above any previous year.

The 1966 production of fire-cured and dark air-cured tobacco may exceed that of 1965. Carryovers for these kinds of tobacco are likely to be down enough from a year earlier to reduce total supplies for 1966-67 below 1965-66.

Both the 1966 production and carryover of Pennsylvania cigar filler tobacco seem likely to be down from a year earlier, and total supply for 1966-67 may be below each of the 3 preceding years. Production of Ohio filler might top 1965 but the reduction in carryover will bring 1966-67 total supply down to a record low. The Puerto Rican cigar filler crop harvested early this year was down sharply from the big crop of a year

earlier; however, the carryover is still comparatively large. In the past year, except for Philippine tobacco, imports and stocks of foreign cigar tobaccos were substantially reduced.

The 1966-67 supply of Connecticut Valley binder may be at a new low, due to a further decline in carryover. For Wisconsin tobacco, little change in the 1966-67 supply from 1965-66 is expected; about the same size production as last year and approximately the same carryover seems likely for the Southern and Northern Wisconsin types on a combined basis.

The 1966-67 supply of Connecticut Valley cigar wrapper tobacco may reach a new high, due to a record carryover. The 1966-67 supply of Georgia-Florida wrapper will be down from 1965-66. The 1966 crop was substantially reduced and its quality adversely affected by hurricane Alma.

Government price support levels for 1966 tobacco eligible for price support are about 2 percent higher than for 1965. The increase results from a rise in the parity index which measures changes in prices paid by farmers. As specified by law, tobacco price support levels are adjusted to reflect changes in this index.

TOBACCO PRODUCTS

Cigarettes

In the year ending June 30, 1966, U. S. smokers (including overseas forces) consumed an estimated 534 billion cigarettes--about 2 billion more than in 1964-65 and above any previous fiscal or calendar year. The 1965-66 shipments for use by overseas forces were the largest since 1952, and the increase in these shipments accounted for the increase in the total consumption figure.

The 1965-66 output of cigarettes is estimated at 563 billion--slightly more than 1964-65. Cigarette exports likely totaled about 24 billion--down about 1 billion from 1964-65 when they topped any previous fiscal year. Cigarette shipments to Puerto Rico probably reached a new high in 1965-66.

On March 21-22, five major companies placed into effect price increases on cigarettes that cut in half the increases announced earlier that month. (See March 1966 Tobacco Situation, page 6.) Effective May 9, the sixth major company raised prices on its brands by a like amount. Manufacturers' prices (net of Federal excise tax and trade discounts) are about $4\frac{1}{4}$ percent higher for regular-size nonfilter tips, and 4.1 percent higher for king-size nonfilter tips and filter tips than before the increases. These increases at the manufacturer level have resulted in increases of mostly 5 or 6 cents on retail sales by the carton (10 packs). For single pack sales, the increase was generally 1 cent per pack; for 2-pack sales, the increase was usually 1 cent or $\frac{1}{2}$ cent per pack. On a percentage basis, the increase in retail prices of cigarettes would generally range from 1 to 4 percent depending upon the unit of sale, the retail outlet, and differences in the effect of State and local tax rates on cigarette prices. An example of the effect of tax rates on the retail price of cigarettes would be a purchase in New York City compared with Ohio. A pack of cigarettes bought in a supermarket in New York City would retail 9 cents higher than in Ohio; in New York City, a State tax of 10 cents plus the New York City tax of 4 cents would apply, while in Ohio the State tax of 5 cents per pack would apply.

Oregon will place into effect a 4 cents-per-pack tax on cigarettes on July 1, 1966. The only State without a cigarette tax is North Carolina.

1/ Subject to revision. 2/ Includes Canal Zone. 3/ Includes over 100 foreign destinations in recent years.

Compiled from publications and records of the Bureau of the Census.

During July 1965-April 1966, cigarette exports were 2 percent lower than in the corresponding period a year earlier. Among the 10 top ranking destinations, France showed the sharpest decrease--28 percent; exports to Paraguay, however, showed an increase of 84 percent. (See table 2.)

Cigars, Cigarillos, Small Cigars

In the year ending June 30, 1966, U. S. smokers (including overseas forces) probably smoked about 8.6 billion cigars--approximately 300 million fewer than in 1964-65, but about 335 million more than in 1963-64. The proportion of cigars coming from Puerto Rican factories continued to gain and probably accounted for 12 percent of total consumption, compared with 9½ percent a year earlier.

The Cigar Manufacturers Association of America sponsors annual surveys that indicate the proportion of total cigar sales that are cigarillo-size--weighing over 3 pounds but not over 10 pounds per thousand. Regular-size cigars usually weigh more than twice as much as the average cigarillo. In calendar 1965, domestic sales of cigarillo-size cigars totaled nearly 2.3 billion--about 26½ percent of the combined sales of regular-size and cigarillo-size cigars. This was nearly double the proportion in the cigarillo-size category 5 years ago. The 1965 domestic sales of cigarillo-size cigars were only slightly less than in 1964, but sales of regular-size cigars declined 6 percent from the long-time high attained in 1964. For the first time, data were obtained that indicated the proportions of cigars that were tipped; over 59 percent of the cigarillo-size cigars sold in 1965 had tips, but only 3 percent of the regular-size cigars had tips.

Small cigars--about cigarette size, weighing not more than 3 pounds per thousand--are counted as a separate category from regular-size and cigarillo-size cigars. During July 1965-April 1966, the output of small cigars was about 2 percent above the corresponding period a year earlier, but taxable removals from factories declined 1½ percent below the year-earlier period.

Commercial exports of cigars continued to gain during 1965-66; an estimated 64 million were shipped, nearly 20 million more than in 1964-65. The leading outlets by far were France and Canada. Iceland, Britain, the Bahamas, Japan, South Africa, Kuwait, Hong Kong, and Portugal were other important outlets.

Smoking Tobacco

Production of smoking tobacco (for pipes and "roll-your-own" cigarettes) in the year ending June 30, 1966, is estimated at near 71 million pounds, about 4 percent below 1964-65 and 12 percent below the 9-year high of 1963-64. The sharpest decline compared with a year earlier occurred in October-December 1965; the decline was relatively less in the other quarters of the 1966 fiscal year.

For many years, the source of statistics on production and factory removals of smoking tobacco, chewing tobacco, and snuff were reports of the Internal Revenue Service. These data are no longer available, and have been replaced by a quarterly USDA report of manufacture and sales of these products. (See March 1966 Tobacco Situation, pp. 15-16.) Adding January-March 1966 domestic sales of smoking tobacco to July-December 1965 taxable removals results in a total of about 49 million pounds, nearly a tenth below taxable removals in the first 9 months of fiscal 1965.

In January 1966, the Bureau of Labor Statistics index of wholesale prices of smoking tobacco (revised) increased about 6 percent from the previous month and remained

^{1/} After December 1965, taxable removals data replaced by domestic sales, and tax-exempt removals data replaced by export sales. See March 1966 Tobacco Situation, pp. 15-16. ^{2/} Prior to July 1962 and after December 1965, data are from Census import classification covering mainly smoking tobacco; from July 1962 through December 1965, data represent taxable removals of imported smoking tobacco reported by Internal Revenue Service. ^{3/} Total removals (or sales) plus imports minus exports in packages. ^{4/} Includes specially-prepared cigarette tobacco, cut or granulated tobacco, partially-processed blended tobacco and shredded tobacco. Virtually all of the smoking tobacco in this export class was not included in Internal Revenue Service output figures for smoking tobacco. ^{5/} Subject to revision. ^{6/} Preliminary estimate.

Basic data but not the estimates compiled from reports of the Internal Revenue Service, Bureau of the Census, and Consumer and Marketing Service, USDA.

unchanged through April. The Federal excise tax of 10 cents a pound was eliminated January 1, 1966. This was not passed on by some manufacturers, and the added amount accordingly changed the index, which is based on prices exclusive of taxes. Prior to the increase, the index had stayed at the same level since April 1964.

For the year ending June 30, 1966, imports of smoking tobacco may be somewhat below the peak $2\frac{1}{2}$ million pounds during 1964-65. Most of the smoking tobacco imported in this country comes from the Netherlands and the United Kingdom.

Only a small fraction of smoking tobacco production is exported. In the past 2 years or so, these exports have been at a higher level than in other recent years. In January-April 1966, exports were 47 percent ahead of those a year earlier (affected by the dock strike in January and February 1965). Sizable increases occurred in shipments to Canada, Iceland, and Australia, while a significant quantity went to Japan, in contrast with none a year earlier. Exports to West Germany and Denmark were moderately smaller than a year ago.

Smoking Tobacco in Bulk for Export

The smoking tobacco in bulk export category includes specially prepared cigarette tobacco, cut or granulated tobacco, partially processed blended tobacco, and shredded tobacco. In 1965, these exports reached a record 13.4 million pounds; for the year ending June 30, 1966, they are estimated to be about 13.8 million pounds--about 5 percent above 1964-65. In January-April 1966, they were 6 percent larger than a year earlier. Exports to Switzerland dropped to only a small fraction of the substantial year-earlier figure, but there were big increases to the Dominican Republic, the Netherlands, Peru, Ecuador, Bolivia, Belgium, and Austria. Shipments to Panama rose moderately, while an appreciable quantity went to Australia. Exports to Spain and Finland declined, but those to Haiti held even.

Chewing Tobacco

Output of chewing tobacco in the year ending June 30, 1966, is estimated at near 65 million pounds--about the same as in the previous year. Production of plug chewing was probably a little below 1964-65, but this likely was offset by some increase in scrap chewing. These make up about 90 percent of total chewing tobacco; fine-cut and twist comprise the remaining 10 percent. Output of fine-cut may have been up a little from 1964-65, while that of twist likely was about the same.

The Bureau of Labor Statistics revised index of wholesale prices of plug chewing tobacco for January 1966 rose about $7\frac{1}{2}$ percent from the previous month and remained unchanged through April. The index is based on prices exclusive of taxes, and the increase reflects the fact that not all manufacturers passed on the eliminated Federal excise tax. Prior to the increase, the index had stayed level since October 1963.

Most chewing tobacco is consumed domestically. Exports, consisting principally of twist and plug, have trended downward. In January-April 1966, however, exports were more than double the relatively small total a year earlier. Consignments to Australia, leading outlet, were up sharply, and larger quantities than a year ago also went to Panama. Less than a year earlier was exported to the French Pacific Islands and the Trust Territory of the Pacific Islands.

1/ Subject to revision. 2/ Preliminary estimate.

Basic data but not the estimates compiled from reports of the Internal Revenue Service and Consumer and Marketing Service, USDA.

Snuff

Production of snuff in the year ending June 30, 1966, is estimated at near 30 million pounds--about 1 percent below the preceding year and the sixth successive year of decline. Virtually all U. S. snuff output is consumed in this country.

The Bureau of Labor Statistics revised index of wholesale prices of snuff for January 1966 rose nearly 7 percent from the preceding month and remained unchanged through April. The increase probably reflected the fact that not all manufacturers passed on the eliminated Federal excise tax. Prior to this advance, the index had stayed level since March 1964.

EXPORTS OF UNMANUFACTURED TOBACCO FROM THE UNITED STATES 1/

For the year ending June 30, 1966, U. S. exports of unmanufactured tobacco are estimated at around 465 million pounds (530 million, farm-sales weight)--about 20 million below 1964-65 and below the 1954-63 average. Exports of flue-cured, the principal export class, are estimated to have been less than in 1964-65. In the first 10 months of 1965-66, total tobacco exports were running a little ahead of those a year earlier, but a slow-up toward the end of 1965-66, when provisions for an expanded export program for tobacco were being worked out, probably kept shipments below the comparable period a year ago.

On June 10, the U. S. Department of Agriculture announced broadened tobacco export provisions to extend export payments of 5 cents per pound to most kinds of tobacco in an effort to regain and expand foreign markets. The expanded program will be applicable to all crops of the kinds of U. S. produced tobacco on which price support is offered for the 1966 crop. Tobaccos not covered are cigar wrapper, Pennsylvania cigar filler, and Maryland tobaccos.

The payments provided for in the recent announcement are in addition to rebates previously offered for selected crops of flue-cured, fire-cured, and dark air-cured tobacco. This earlier offer provides for a refund of 5 cents per pound on exports of flue-cured and fire-cured (types 22-23) tobaccos acquired from Government loan stocks of the 1960-62 crops; Virginia fire-cured, type 21, acquired from loan stocks of the 1959-62 crops; and dark air-cured tobacco (types 35-36) acquired from loan stocks of the 1961 and 1962 crops. Exports from dealers' stocks of the mentioned kinds and crops are also eligible for an export payment of 5 cents per pound, provided sales were made on or after May 6, 1966, for the specified crops of flue-cured and May 24 for the other kinds.

The United States, world's leading producer and exporter of tobacco, has not shared in recent increases in world tobacco trade. In 1965, the United States supplied 26 percent of the 1.8 billion pounds of unmanufactured tobacco that moved in free-world commerce; in 1952-56, its share was 37 percent. (See table 12.)

Major exporters and quantities of unmanufactured tobacco shipped in 1965 and the previous 2 years were as follows:

Country	1963	1964	1965
	Mil. lb.	Mil. lb.	Mil. lb.
United States	505	515	468
Rhodesia, Zambia, Malawi	213	252	*297

^{1/} Also Dark African and Water Baler. ^{2/} Formerly French West Africa. ^{3/} Preliminary. ^{4/} October 1965-April 1966.

Computed from the declared values and export weights as reported in the publication of the United States Department of Commerce.

Significant quantities were also exported in 1965 by the following: Cuba, an estimated 30 million pounds; Argentina, 26 million; Colombia 22 million; and Mexico, 11 million. Japan exported about 17 million pounds of unmanufactured tobacco, of which nearly 10 million were burley, shipped mainly to West Germany at the equivalent of 52 cents per pound.

The United States ranks third among the world's importers of tobacco, importing cigarette and cigar tobaccos for blending with domestic types. The United Kingdom usually is the world's leading tobacco importer, and West Germany usually ranks second. In 1965, however, this ranking was reversed. Table 13 shows quantities received in 1965 and other recent years by 13 principal importing countries. These countries accounted for 73 percent of total free-world imports in 1965. If U. S. imports were added, the 14 countries would account for 84 percent.

U. S. exports of unmanufactured tobacco in fiscal 1966-67 probably will exceed the estimated 1965-66 total by a sizable margin. Exports of flue-cured tobacco are expected to be significantly larger than in 1965-66.

Major Foreign Countries

Exporting Tobacco

The Rhodesian flue-cured crop harvested in early 1966 is unofficially estimated at around 200 million pounds, compared with 233 million in 1965 and the record 300 million in 1964. Press reports indicate that by the first week of June less than a third of the crop may have been sold at the closed auctions that began March 29. At this writing, discussion is underway between officials of Rhodesia and the United Kingdom concerning formal negotiations to settle the dispute.

The 1965 flue-cured crop in Canada, estimated at 156 million pounds, was about 9 percent above the 1964 crop, which was smallest in 9 years. In Ontario, where over nine-tenths of the crop is produced, the auction sales price average was the highest on record--66.0 Canadian cents per pound. The 1966 quota acreage in Ontario was increased 43 percent over 1965, and expanded acreage could produce a record flue-cured crop ranging from 210 to 230 million pounds. In 1965, flue-cured production in Ontario was 154 million pounds; the previous record crop was in 1960, when 200 million pounds were produced.

Canada's exports of flue-cured in 1965 totaled about 39 million pounds--about a fifth below record shipments in the previous year. The average value per pound was equivalent to 79 U. S. cents per pound compared with about 68 cents in 1964. The United Kingdom accounted for over 80 percent of the 1965 total. About 1 million pounds went to Hong Kong, and amounts ranging from around 300,000 to 500,000 pounds went to Belgium, the Netherlands, Malaysia, Syria, West Germany, Norway, and Denmark.

India's 1966 flue-cured crop is placed at about 225 million pounds, 7 percent below 1 year earlier and 11 percent below the record 2 years earlier. Exports of flue-cured in 1965 totaled about 115 million pounds--a decline of 16 percent from the previous year's peak level. The average value per pound was equivalent to 35 U. S. cents, compared with 31 cents in 1964. The Soviet Union reduced takings 19 percent, but still accounted for half of the total. The United Kingdom accounted for nearly 30 percent and took virtually the same quantity as the year before. The average value per pound of exports to the United Kingdom was equivalent to 60 cents a pound; to the Soviet Union, it was 24 cents. Other sizable markets for Indian flue-cured exports in 1965 were East Germany, Egypt, Belgium, Malaysia, the Netherlands, Japan, and Poland, each of which took a quantity ranging from 1 to about $3\frac{3}{4}$ million pounds.

^{1/} Unmanufactured tobacco. ^{2/} Subject to revision.

Compiled from reports of Foreign Agricultural Service.

Oriental tobacco production in Turkey in 1965 has been estimated at about 262 million pounds--nearly a third smaller than the 1964 record crop and about a tenth below the 1963 crop. Unmanufactured tobacco exports in 1965, at 151 million pounds, were about a fifth larger than the previous year. Over 60 percent was consigned to the United States, which boosted takings sharply. Other countries increasing takings included Japan, Belgium, Czechoslovakia, East Germany, and Italy, and a sizable quantity went to Egypt, in contrast with none the previous 2 years. West Germany, second ranking outlet, cut takings an eighth; less than in 1964 also went to Poland, Hungary, and Switzerland. Average values per pound of 1965 exports to selected major destinations were as follows (rounded to nearest U.S. cent): United States, 64; West Germany, 54; Japan, 60; and Belgium, 43.

The 1965 crop of oriental tobacco in Greece is now estimated at about 267 million pounds, 8 percent less than the peak in 1964 and 5 percent less than 1963. Unmanufactured tobacco exports in 1965, at 157½ million pounds, were about equal to those in 1964; this level was above any previous year. Average values per pound for major destinations were as follows (rounded to nearest U.S. cent): West Germany, 64; United States, 82; Soviet Union, 72; France, 60; Poland, 75; and Japan, 79. In January-March 1966, exports were 27 percent ahead of those a year earlier. Shipments to the United States about doubled, and made up about 40 percent of the total. There were also increased exports to West Germany, Poland, Hungary, and Belgium, but reductions to Italy, Egypt, Soviet Union, East Germany, and France.

Burley production, which has been expanding steadily in Greece, amounted to 9.9 million pounds in 1965, compared with about 8 million in 1964, and only 18,000 pounds in 1960, when commercial production first got underway.

Duties on Greek tobacco imported into the European Economic Community (EEC, consisting of West Germany, Belgium, the Netherlands, Luxembourg, France, and Italy) have been reduced 10 percentage points, effective in 2 stages of 5 percent each--on July 1, 1966, and on January 1, 1967. As of the latter date, EEC duties on Greek tobacco will be equal to only 20 percent of those originally in force in 1958.

British Tobacco Situation

The United Kingdom imported 270 million pounds of unmanufactured tobacco (mostly flue-cured) from all sources in July 1965-April 1966, slightly more than a year earlier. Tobacco imports from the United States dropped 18 percent, while those from Rhodesia, Zambia, and Malawi rose 9 percent. (No imports from Rhodesia were received after February 1966; imports following Rhodesia's unilateral declaration of independence in November 1965 represented tobacco already purchased.) Imports from India declined a little, but receipts from Canada jumped 26 percent. Imports from the United States made up 35 percent of the total, compared with 43 percent a year earlier and 50 percent 2 years earlier. Commonwealth sources provided 60 percent of total July 1965-April 1966 imports, compared with 55 percent a year earlier and 48 percent 2 years earlier.

In the United Kingdom, gross clearances of tobacco from bond are an approximate measure of use for domestic consumption and exports. In the 9 months ended March 31, 1966, gross clearances totaled 227 million pounds, of which 212 million were flue-cured. Compared with a year earlier (when there was an unusual upsurge in March), total clearances were down 4.4 percent, and those of flue-cured were down 4.5 percent. The reduction was all in gross clearances of U. S. flue-cured, which fell 11 million pounds or over a tenth. Gross clearances of Rhodesian and Indian flue-cured were up slightly, and those of Canadian flue-cured remained steady. U. S. flue-cured made up 42.5 percent of reported total clearances of flue-cured, compared with 45.6 percent a year earlier and 49.0 percent 2 years earlier.

1/ Unmanufactured tobacco. 2/ The full duty rate on tobacco from the United States and other nonpreferential areas is about 2 percent above the preferential rate on tobacco from Commonwealth areas. 3/ Beginning with 1957, stocks not strictly comparable with prior years. 4/ Largely withdrawals for manufactures for home use and export. 5/ Subject to revision. 6/ Stocks as of March 31 in the latter year specified. *July-March.

Compiled from official United Kingdom sources.

During July 1965-March 1966, British consumption of tobacco (net clearances from bond) was 6 percent below a year earlier and 5 percent below 2 years earlier. The growth in filter tip cigarettes, which require less tobacco per unit than non-filter tips, and the sharply higher proportion of imports made in stemmed form, which increases the amount of usable leaf from the same weight of tobacco, have reduced clearances. In 1965, filter tip cigarettes comprised 53 percent of total sales, compared with 42 percent in 1964 and only 16 percent in 1960. Similarly, about 83 percent of the United Kingdom's tobacco imports in 1965 were in stemmed form, compared with 70 percent in 1964 and only 33 percent in 1960.

In 1965 the United Kingdom ranked third--exceeded only by the United States and Bulgaria--in the exportation of cigarettes, which make up most of the United Kingdom's tobacco exports. In July 1965-April 1966, cigarette exports of the United Kingdom were 17 percent above a year earlier. Among the principal markets, more British cigarettes than a year earlier were shipped to Kuwait, Aden, Hong Kong, Malaysia and Singapore, West Germany, French Somaliland, Persian Gulf States, the Netherlands, and Cyprus, but fewer went to Sudan, Libya, and Gibraltar.

Manufacturers' stocks of leaf tobacco in the United Kingdom on March 31, 1966, amounted to 500 million pounds--9 million above the 5-year low for that date a year earlier, but 15 million less than 2 years earlier. Total flue-cured stocks, at 453 million pounds, were about equal to those a year ago, but there were marked changes in holdings by source country. Stocks of U.S. flue-cured fell 6 percent to 205 million pounds, and were the smallest March 31 holdings in 11 years. On the other hand, stocks of Rhodesian flue-cured, at 141 million pounds, and Canadian flue-cured, 60 million, rose 9 and 8 percent, respectively, to record levels for that time of year. Stocks of Indian flue-cured, about 47 million pounds, were down a little from March 31, 1965. British stocks of Malawi dark fire-cured and Indian air- and sun-cured increased moderately, and of Malawi air- and sun-cured, increased sharply.

UNITED STATES IMPORTS AND STOCKS OF FOREIGN-GROWN TOBACCO 2/

U.S. imports for consumption of foreign-grown tobacco during January-April 1966 were 9 percent less than a year earlier. Cigarette leaf imports were down 6 percent; those from Turkey and Greece declined 1 and 5 percent, respectively, and from Yugoslavia, dropped nearly a fourth.

January-April 1966 general imports of cigarette leaf--which include quantities going into bonded warehouses in addition to those entering consumption channels upon arrival--jumped 56 percent above those a year earlier (affected by the dock strike). Larger arrivals from Turkey accounted for the bulk of the increase, although arrivals from Greece were also up substantially. The average value per pound of general imports from Turkey declined 11 cents from that a year earlier, while the comparable figure for Greek tobacco rose about 5 cents.

Stocks of foreign-grown cigarette and smoking tobacco in the United States on April 1, 1966, totaled 352 million pounds (farm-sales weight equivalent)--16 percent above a year earlier and largest holdings for any date on record.

2/ Imports of tobacco are on a declared-weight basis and stocks are on a farm-sales weight basis.

1/ 1960-62 average. 2/ Less than 50,000 pounds. 3/ Includes quantities from other countries not separately listed.
4/ Includes scrap from Canada and filler from Japan. Detail may not add to total, due to rounding. *Omitted because computed value unaccountably high.

Note: General imports include all arrivals in the United States as distinguished from "imports for consumption" which represent merchandise entering into domestic consumption channels.

Imports for consumption of scrap tobacco (small pieces of leaves used in cigars) fell 20 percent below January-April 1965; declines in imports from the Dominican Republic, Colombia, Brazil, and Indonesia more than offset a moderate gain in Philippine scrap. Cigar filler imports were up from a year earlier, mainly due to an increase in Colombian leaf.

General imports of cigar tobacco during January-April 1966 were only about half those a year earlier, attributable mainly to sharp cuts in arrivals of unstemmed cigar filler from Brazil, the Dominican Republic, and Colombia. Arrivals of scrap from the Philippine Republic were also down appreciably. General imports of cigar tobacco and the average values per pound during January-April 1966 and in prior years are shown in table 16.

April 1, 1966, stocks of foreign-grown cigar tobacco, by country of origin, are shown on page 37.

OUTLOOK AND SITUATION FOR TOBACCO LEAF

Flue-cured, Types 11-14

1966-67 Supplies

Taking into account the trend in average yield per acre as modified by the limitations of the acreage-poundage program, it seems likely that the 1966 production may be about 1,198 million pounds--one-eighth larger than the 1965 production sold. (A relatively small quantity of 1965 tobacco may be sold on 1966 auctions, but an estimated 17 million pounds harvested and cured in 1965 were not, nor will be, sold.) The increase in this year's marketings over last will be mainly due to increased marketings by growers who last year fell short of their poundage quotas. Under the acreage-poundage program, growers can make up for last year's undermarketings by selling that much additional this year; those that overmarketed last year have reductions in their quotas this year equivalent to their overmarketings. Individual growers' acreage allotments are also adjusted to take into account last year's undermarketings or overmarketings. In 1965, undermarketings were about 69 million pounds larger than overmarketings. In 1966, as in 1965, farmers who comply with their farm acreage allotment can market up to 110 percent of their poundage quota with price support; but marketings beyond 100 percent of the farm poundage quota will be deducted from the 1967 quota for the farm.

Carryover of flue-cured tobacco on July 1, 1966, is estimated at about 2,434 million pounds--down 121 million from the peak of a year earlier. If the production that will be sold should equal 1,198 million pounds, the 1966-67 total supply would be 3,632 million pounds--slightly above 1965-66 but 142 million below the peak level of 1964-65. The 1966-67 supply would be about 2.8 times anticipated disappearance (combined domestic use and exports), compared with a ratio of 3.1 in 1964-65 when supplies were the largest on record. A supply-disappearance ratio of about 2.5 is considered to represent a fairly well balanced situation.

Domestic Use and Exports

Partial-year data indicate that domestic use of flue-cured in the year just ending (July 1965-June 1966) may be around 765 million pounds--roughly 10 million below 1964-65. The method for deriving the domestic use figure provides an approximation, but it does not provide a precise measurement of manufacturers' usings in a given 12-month period. Cigarette output--the predominant outlet--is estimated to have been slightly higher in 1965-66 than in 1964-65. The filter tip proportion rose and

these require less tobacco than nonfilter tips per unit of output. It appears likely that the proportion of reconstituted sheet tobacco used may have increased a bit, and also the use of imported tobacco probably gained some.

Exports of flue-cured tobacco in 1965-66 are estimated at around 415 million pounds--nearly 30 million under 1964-65. A broadened program to assist tobacco exports was announced on June 10 by the U. S. Department of Agriculture. Under this program, a payment of 5 cents per pound will be made on exports of tobacco produced in any crop year if the 1966 crop of that kind of tobacco is to receive price support. Shipments in June were probably light, since shippers were awaiting issuance of regulations covering terms and conditions under which the program was to operate. Exports of flue-cured tobacco in 1966-67 are expected to rise significantly above the low level of the previous 2 years. Exports were already being aided by the policy applicable to sales of 1960-62 crop tobaccos under Government loan, and also applicable to 1960-62 tobaccos held by the trade. Upon proof of exportation of such 1960-62 tobaccos, a 5-cents-per-pound rebate or payment is made. The Flue-cured Tobacco Cooperative Stabilization Corporation--the growers' association handling Government loan stocks of flue-cured tobacco--reported June 1 that 21 million pounds had thus far been sold to customers who could export and qualify for the 5-cents-per-pound rebate. Also, the sale--on a bid basis--of the major part of the 1957-59 loan stocks remaining as of mid-February is expected to aid flue-cured exports. About 59 million pounds (farm-sales weight) were sold on a bid basis at prices that made it available to world markets more competitively priced than before.

During July 1965-April 1966, exports of flue-cured (unstemmed equivalent) to the United Kingdom--the leading export outlet--were 19 percent below a year earlier and lowest in several years. Flue-cured tobacco exports to West Germany--second ranking outlet--were up about 4 percent, and those to Japan--third ranking outlet--jumped 56 percent. The next 3 ranking outlets--the Netherlands, Australia, and Belgium--took 42, 29, and 4 percent more, respectively, than in the like period a year earlier. On the other hand, less went to Ireland, Denmark, Sweden, Finland, Portugal, France, Austria, Italy, Hong Kong, and Taiwan in the recent period than in July 1964-April 1965. Among the countries that increased their takings over the year-earlier period were Norway, Switzerland, New Zealand, Thailand, South Vietnam, and Malaysia. Egypt took a substantial quantity under P. L. 480--about triple the volume of a year earlier.

Prices and Price Support

The 1965 marketings brought an average of 64.6 cents per pound--about 6 cents higher than the average for the 3 preceding crops and slightly topping the 64.3 cents per pound received for the 1961 crop. The Government support level for the 1965 crop was 57.7 cents per pound. About $6\frac{3}{4}$ percent of the deliveries to market went under Government loan--a marked contrast with 1964 and 1963 when over a fifth of each crop went under Government loan.

There have been substantial sales from Government loan stocks in the past year. During the 11 months through May 31, 1966, 188 million pounds (farm-sales weight) were sold compared with 85 million pounds in the preceding year. Government loan stocks of flue-cured on May 31 totaled 777 million pounds compared with the peak holdings of 960 million pounds on January 1, 1965.

The 1966 crop support level is 58.8 cents per pound--nearly 2 percent above 1965 and 6 percent above 1959. The increase in the support price reflects the change in the parity index between 1959 and the recent 3-year average (1963-1965) as prescribed by law. The parity index measures changes in prices paid by farmers for commodities and services.

1/ Year beginning July 1. 2/ Subject to revision. 3/ Through 1959--90 percent of parity price; 1960 set at 1959 level; from 1961 on, adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent calendar years. 4/ As reported by Flue-cured Tobacco Cooperative Stabilization Corp.; the unstemmed loan stocks on a packed-weight basis average about 11 percent less than these farm-sales weight figures.

*Preliminary estimates--production based on an average yield with an allowance for trend.

In the coming marketing season, price supports will be available on untied tobacco of all grades during the first 12 days on all markets in South Carolina, North Carolina, and Virginia. In the past 3 seasons in these markets, prices of untied flue-cured tobacco graded as lugs, primings, and in the nondescript grades thereof, were supported for the first 7 days. Shortage of labor for tying tobacco and favorable prices for tobacco in untied form in recent seasons led many farmers to strongly urge additional marketings of untied tobacco. Price support for untied tobacco will be 3 cents lower for each grade than for tied tobacco--the same differential as in the 1965 season. In the areas where most tobacco is marketed in tied form, price support for tied tobacco is in effect throughout the marketing season. In Georgia-Florida, where for many years all flue-cured marketings have been in untied form, price support on an untied basis is available for all grades throughout the marketing season.

As in past marketing seasons, no price support will be offered on any tobacco graded N2, No-G, U (unsound), W (doubtful keeping order) or scrap. Any such tobacco marketed will be charged against the quotas for the farms on which it was produced. It is expected that a normal supply of such tobaccos will be available during the marketing year.

Burley, Type 31

1966-67 Supplies

Burley acreage for 1966 is down an indicated 13 percent from 1965. Acreage allotments for farms not covered by special provisions applying to small allotments were reduced 15 percent. Based on an average yield per acre, with allowance for trend, the 1966 burley crop would be 543 million pounds--7 percent less than the 1965 crop.

Carryover on October 1, 1966 (beginning of the 1966-67 marketing year), is expected to be near 1,395 million pounds--around 20 million less than a year earlier. If this year's crop should be near 543 million pounds, total 1966-67 supplies--production plus indicated carryover--would be 1,938 million pounds, about 3 percent below those for the current year.

Domestic Use and Exports

In the year ending September 30, 1966, domestic use of burley may approximate 550 million pounds--about 2 percent below the unusually large figure of 1964-65. The 1964-65 domestic disappearance was larger than could have been expected on the basis of the level of cigarette output, chief outlet for burley, especially when reduced outputs of smoking and plug chewing tobacco, secondary outlets, are also considered. In the current marketing year, cigarette output may be up some from 1964-65, but output of smoking and plug chewing tobacco will likely be smaller.

Exports of burley in 1965-66 may approximate the 56 million pounds (farm-sales weight) of the previous year. In the first 7 months of the current marketing year, burley exports (farm-sales weight basis) were 11 percent above the year-earlier figure, affected by the dock strike. There were large percentage increases in exports to West Germany, Republic of the Congo, Egypt, Denmark, Belgium, Thailand, Australia, France, Switzerland, and Norway, while a sizable quantity went to Tunisia, in contrast with none a year earlier. But exports to Sweden, Mexico, Hong Kong, Austria, and Finland were down sharply while those to Portugal, the Netherlands and Chile were down moderately. Only a minor quantity was reported shipped to Italy, which in the 1964-65 marketing year took over 7 million pounds (farm-sales weight).

^{1/} Year beginning October 1.
^{2/} Subject to revision.
^{3/} Through 1959--90 percent of parity price; 1960 set at 1959 level; from 1961 on, adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent calendar years.
^{4/} Actual loan stocks on a packed-weight basis average about 11 percent less than these farm-sales weight figures.
^{5/} Probably around 30 million pounds of these holdings have been sold.
* Preliminary estimates--production based on an average yield with allowance for trend.

Prices and Price Support

The average price for the 1965 burley crop was a record 66.9 cents a pound--more than a tenth above 1964. Last season, growers placed about 42 million pounds--7 percent of the crop--under loan, the smallest quantity and percentage in 4 years. As of May 31, 1966, Government loan stocks of burley amounted to 286 million pounds (farm-sales weight equivalent), compared with 324 million 1 year earlier and 293 million 2 years earlier. Probably around 30 million pounds have been sold from May 1966 holdings.

The 1966 price support level is 60.6 cents a pound--1.1 cents or about 2 percent above the overall level for the 1965 crop.

Maryland, Type 32 3/

1966-67 Supplies

According to farmers' intentions as of March 1, Maryland acreage this year will be a little larger than harvested in 1965. Acreage allotments are not in effect, since growers disapproved marketing quotas in last February's referendum. Based on an average yield with allowance for trend, about 37.4 million pounds would be produced from 1966 intended acreage--about 3 percent less than the 1965 estimated outturn.

Carryover next January 1 may be near 95 million pounds--about 5 million above last January 1 and the largest on record. The 1966-67 indicated total supply, at about 132 million pounds, is about 3 percent more than for 1965-66 and above any previous year.

Domestic Use and Exports

Domestic use of Maryland tobacco may be moderately below the 4-year high of 1964-65. The chief domestic outlet for Maryland is in the manufacture of cigarettes, but the quantity used for this purpose has not kept pace with expanded cigarette output. Some Maryland is also used as cigar filler, depending upon the availability and prices of certain grades.

Exports of Maryland tobacco in 1965-66 may approximate 12 million pounds (farm-sales weight)--about a fourth above 1964-65 shipments, lowest in 10 years. In the first 7 months of the current marketing year, exports were 30 percent ahead of those a year earlier (affected by the dock strike). Exports to Switzerland, accounting for nearly three-fifths of the total, were up 15 percent, while those to West Germany more than doubled. Belgium and Portugal also sharply increased takings, and a significant quantity went to South Vietnam. On the other hand, the Netherlands cut takings 25 percent, and none was reported shipped to France, in contrast with a significant quantity a year earlier.

Prices and Price Supports

Auction sales of the 1965 Maryland tobacco crop began April 12 and are scheduled to end July 1. Through June 22, auction sales totaled 30.9 million pounds and averaged 66.1 cents per pound, compared with 62.4 cents in the corresponding period last year.

3/ For marketing quota purposes, the carryover and total supply of Maryland tobacco are calculated as of the January 1 falling within the marketing year, October 1 through September 30. Disappearance is calculated on the October-September basis.

1966		No price support <u>6/</u>				
Total	---	---	36.2	---	19.9	

1/ For marketing quota purposes, the carryover and total supply of Maryland tobacco are calculated as of January 1 falling within the marketing year--October 1 through September 30. 2/ Year beginning October 1. 3/ Subject to revision. 4/ Through 1959--90 percent of parity price; 1960 set at 1959 level; from 1961 on, adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent calendar years. 5/ Actual loan stocks on a packed-weight basis average about 2 percent less than these farm-sales weight figures. 6/ Marketing quota not in effect since over one-third of growers voting disapproved. 7/ Through June 22 about 2.4 million pounds, about 8 percent of deliveries. *Preliminary estimates--production based on an average yield with allowance for trend; price is auction market average through June 22.

In addition to the auction volume, about 2.2 million pounds have been received at the Baltimore hogshead market, which opened for competitive sealed bids on April 14. Combined market receipts of Maryland tobacco thus totaled about 33 million pounds, about 86 percent of the estimated 1965 crop.

The overall support level for 1965 Maryland tobacco is 52.8 cents a pound. Through June 22, about 8 percent of auction market deliveries were placed under Government loan, compared with nearly 11 percent a year earlier. The 1966 Maryland crop, to be marketed mostly in 1967, will not receive Government price support, since marketing quotas are not in effect for that crop. Maryland tobacco growers also are not eligible for full payments under the cropland adjustment program, since their 1966 crop is not a "quota crop". Growers will have another opportunity to vote in a referendum in 1967 on whether to have quotas on the 1967-69 crops.

Fire-Cured, Types 21-23

1966-67 Supplies

The intended 1966 acreage of Kentucky-Tennessee fire-cured is down 6 percent from last year, while that of Virginia fire-cured is down 3 percent. Acreage allotments for most farms are about the same as for 1965. If yield per acre equals the average (with allowance for trend), production of the combined fire-cured types would be near 49 million pounds--approximately 3 million above the 1965 crop, which was smallest in 5 years.

Carryover on October 1, 1966, may be around 110 million pounds--nearly 10 million less than last October 1. Such carryover, added to the indicated crop, would provide a total 1966-67 supply approximating 159 million pounds--4 percent below 1 year earlier and 8 percent below 2 years earlier.

Domestic Use and Exports

Based on early indications, domestic use of the combined fire-cured types in October 1965-September 1966 may be around 24 million pounds, moderately below the previous year. Domestic use of both Virginia and Kentucky-Tennessee fire-cured may decline, but the drop in the Virginia type may be relatively sharper.

Exports of fire-cured in the 1965-66 marketing year may be around 32 million pounds (farm-sales weight)--about a sixth above the previous year and second largest in 10 years. During October 1965-April 1966, exports of Kentucky-Tennessee fire-cured jumped 35 percent above those a year earlier. The Netherlands, accounting for over a third of the total, boosted takings 78 percent. Sharply more also went to Switzerland, Belgium, and Sweden, and moderately more, to the Republic of the Congo. Egypt and Tunisia took significant quantities, in contrast with none a year earlier. France, second ranking outlet, reduced takings 9 percent, while South Vietnam cut its takings in half.

Virginia fire-cured exports in October 1965-April 1966 spurted 54 percent ahead of those a year earlier. Substantially increased exports went to Norway, Sweden, West Germany, and New Guinea, while Thailand took a sizable quantity; a year earlier, none went to Thailand. Some Virginia fire-cured was also shipped to Syria and East Germany. The United Kingdom--in recent years the second ranking market for this type--slashed its takings 68 percent.

*Preliminary estimates--production based on an average yield with allowance for trend.

Prices and Price Supports

The 1965 season average price for the combined fire-cured types was 42.9 cents a pound--about 4 percent above the preceding year. Virginia fire-cured averaged 39.9 cents, 7 percent below the record 1964 average, but higher than any other year. The season average for Kentucky-Tennessee type 22 was a record 44.7 cents a pound--up 6 percent from the preceding year. For Kentucky-Tennessee type 23, the 1965 season average, at 40.9 cents, exceeded the previous year's average by 7 percent and was second highest on record.

The Government price support level for 1965 fire-cured was 40.4 cents a pound. Loan placements of Virginia fire-cured totaled about 1 million pounds (about a tenth of the crop), nearly 4 times the record-low figure a year earlier. Placements of types 22 and 23 dropped below the previous year, amounting to 1.8 million and 0.5 million pounds, or 7 percent and 5 percent of the respective crops. For the 1966 fire-cured crop, the overall support level is 41.1 cents a pound--0.7 cent or about 2 percent above the 1965 support.

Dark Air-Cured and Sun-Cured, Types 35-37

1966-67 Supplies

The indicated 1966 acreage of types 35-36 is down 6 percent from 1965, and that of Virginia sun-cured is down 11 percent. Allotments for most farms are about the same as last year. Based on an average yield per acre, with allowance for trend, 1966 production of dark air-cured and sun-cured would be about 20.7 million pounds, slightly larger than the 1965 crop.

Carryover of types 35-37 this October 1 (beginning of the 1966-67 marketing year) is estimated at near 64 million pounds--approximately 2 million less than last October 1. The combined carryover added to the indicated crop would provide a total 1966-67 supply of about 84½ million pounds--3 percent less than for the current marketing year.

Domestic Use and Exports

In the year ending next September 30, domestic use of dark air- and sun-cured tobacco is estimated at about 18½ million pounds--5 percent below 1964-65. Relatively little change may occur in use of Virginia sun-cured but domestic use of dark air-cured, types 35-36, may be moderately lower. In the first half of the current marketing year, manufacture of plug, twist, and fine-cut chewing tobacco--major domestic outlet for these types--was a little below the year-earlier level.

Exports of dark air-cured tobacco in 1965-66 may approach 4½ million pounds (farm-sales weight)--not much different from 1964-65. During October 1965-April 1966, exports of One Sucker leaf were about a fifth larger than a year earlier. Belgium and the Republic of the Congo accounted for most of the total, Belgium tripling its year-earlier takings and the Congo increasing its takings 30 percent. The quantity going to South Vietnam was sharply lower than a year ago. Exports of Green River leaf dropped 29 percent below the relatively large total in October 1964-April 1965. Australia took appreciably more, but less than a year earlier went to the United Kingdom and to the Republic of the Congo. None was reported exported to South Vietnam, in contrast with a significant quantity a year earlier.

1/ Year beginning October 1.

2/ Subject to revision.

3/ Through 1957--66-2/3 percent of burley support; 1958-60 legal basis changed; from 1961 on adjusted to reflect relative change between 1959 parity index and average of parity index for 3 most recent years.

*Preliminary estimates--production based on an average yield with allowance for trend.

A large portion of U. S. exports of dark air-cured tobacco is in the form of Black Fat--a semi-processed product. In October 1965-April 1966, these exports were 8 percent above a year earlier. Nigeria, leading outlet, reduced takings 18 percent and less than a year ago also went to West Africa. But increased exports were made to Ghana, Cameroon, and Togo, and some also went to the Netherlands (probably for transshipment) and to Guinea.

Prices and Price Supports

The 1965 season price for the combined dark air- and sun-cured tobacco crop was 37.3 cents a pound--the same as in the previous year. One Sucker (type 35) averaged 37.6 cents, slightly less than the year before. The 1965 crop of Green River (type 36) brought an average of 36.1 cents--2 percent higher than the 1964 price and second highest on record. The price average for 1965 Virginia sun-cured, at 39.2 cents, was 2 cents (5 percent) below the record average for the 1964 crop but still third highest on record.

The overall level of price support for 1965 dark air-cured and sun-cured was 35.9 cents a pound. In the 1965 season, loan placements (virtually all consisting of types 35-36) totaled 3.2 million pounds--16 percent of the combined crop. The volume was moderately lower, but the proportion was up somewhat. The Government support level for 1966 dark air-cured and sun-cured is 36.6 cents per pound--0.7 cent or about 2 percent higher than in 1965.

Cigar Tobacco, Domestic and Imported

1966-67 Supplies

Filler: Pennsylvania cigar filler acreage in 1966 may be lower than in 1965 and based on average yield adjusted for trend the 1966 production could approximate 46 million pounds--about 5 million lower than in 1965. In 1965, yields per acre averaged second highest on record. Carryover on October 1 may be around 125 million pounds-- $4\frac{1}{2}$ million below a year earlier, and this plus the new crop would provide a total supply for 1966-67 of about 171 million pounds. This estimate of supply is over $9\frac{1}{2}$ million lower than for 1965-66 and also below that of the 3 preceding years.

Acreage of Ohio filler may be a little below 1965, but based on an adjusted trend yield the 1966 crop may top 6 million pounds--up a half-million from the long-time low of last year. Last year's yield per acre was the lowest in 7 years. Carryover next October 1 may be about $15\frac{1}{2}$ million pounds. Total supply for 1966-67, at roughly $21\frac{1}{2}$ million pounds, would be down over 1 million from 1965-66 and the smallest on record.

The Puerto Rican filler (type 46) planted in late 1965 and mostly harvested in the early months of 1966 might approximate 18 million pounds--down sharply from the large crop of 37.9 million of a year earlier and the smallest in many years. Carryover next October 1 is estimated at $52\frac{1}{2}$ million pounds--down 10 million from the long-time high of October 1, 1965, but second largest in 10 years.

Imported cigar tobacco: In calendar 1965, about 84 million pounds (farm-sales weight) of foreign cigar tobacco arrived in the United States--23 percent less than the big quantity of a year earlier. In January-April 1966, the drop continued and a 44 percent smaller quantity arrived than in the same months of 1965. Arrivals from the Philippine Republic and the Dominican Republic were down 25 and 90 percent, respectively, and those from Colombia and Brazil were down 40 and 86 percent, respectively. Also, there were smaller arrivals of tobacco from Paraguay, Indonesia, and Jamaica, but more came from Mexico and Argentina. The January-April arrivals from Honduras nearly equaled those in the like period of 1965.

April 1 stocks of foreign cigar tobaccos in the United States, compared with 1 and 2 years earlier, are shown below:

Country of origin	April 1 stocks--farm-sales weight		
	1964	1965	1966
	Mil. lb.	Mil. lb.	Mil. lb.
Philippines	17.7	36.6	47.2
Dominican Republic	12.8	23.0	15.0
Colombia	11.0	18.5	15.9
Brazil	7.1	16.6	15.3
Cuba	19.6	12.9	7.8
Indonesia	2.7	7.0	6.6
Paraguay	2.6	4.1	4.3
Other	3.8	7.7	10.6
Total	77.3	126.4	122.7

The stocks of Philippine tobacco are the highest on record for April and reflect the unusually large imports during calendar 1965.

Binder: Connecticut Valley binder tobacco acreage is expected to be near a record low. Production may be about 5 million pounds--not much different from last year. Carryover next October 1 is estimated at around 20 million pounds--down more than 1 million to a new low. Total supply for 1966-67, at approximately 25 million pounds, could be under that of any previous year.

The 1966 acreage in Southern Wisconsin may be near the 1965 level, and in Northern Wisconsin down slightly. Production might approximate $19\frac{1}{2}$ million pounds--close to 1965 harvestings. Carryover next October 1 is estimated at $49\frac{1}{2}$ million pounds, virtually the same as a year earlier. Total supply for 1966-67, at around 69 million pounds, would be little, if any, different from 1965-66 but up about $1\frac{1}{2}$ million from 1964-65.

Wrapper: The 1966 acreage of Connecticut Valley wrapper may be slightly less than in 1965, and acreage of Georgia-Florida wrapper may be down a tenth from the record 1965 level. Production in the Connecticut Valley may be fairly close to last year's 14.6 million pounds, but the 1966 crop in Georgia-Florida was substantially reduced and its quality adversely affected by hurricane Alma. Last year's average yield per acre in the Georgia-Florida area was second lowest in 6 years. Carryover of Connecticut Valley wrapper on July 1 is estimated at about 16 million pounds--up about $1\frac{3}{4}$ million from a year earlier. Carryover of Georgia-Florida wrapper, at about

1/ Year beginning October 1.
 2/ Adjusted to take into account 1962 tobacco still held at the farm level at end of 1962-63 marketing year.
 3/ Subject to revision.
 4/ Puerto Rican planting occurs late in calendar year.
 5/ Tentative.
 *Preliminary estimates--production based on an average yield with an allowance for trend.

$7\frac{3}{4}$ million pounds, is $\frac{1}{2}$ million above a year earlier, but lower than in each of the preceding 4 years. Prospective total supply for 1966-67 of Connecticut Valley wrapper is about $30\frac{3}{4}$ million pounds--a new high. The supply of Georgia-Florida wrapper will be lowest in several years due to the reduction in this year's production resulting from hurricane damage.

Disappearance and Exports

Filler: The 1965-66 disappearance of Pennsylvania cigar filler may approach 56 million pounds--about $1\frac{1}{2}$ million above 1964-65. Domestic use may rise slightly to a long-time high and exports will likely top 1 million pounds--more than double those of each of the past 2 years. South Vietnam, Canada, and the United Kingdom were the principal export destinations. The 1965-66 disappearance of Ohio filler is estimated at 7 million pounds--1 million lower than in 1964-65; the 1965-66 disappearance of Puerto Rican filler may approximate 28 million pounds--about $1\frac{1}{4}$ million more than in 1964-65.

Use of imported filler: During October 1965-April 1966, Philippine tobacco imported for consumption totaled nearly 12 million pounds (farm-sales weight equivalent)--one-fifth less than in the same months a year earlier. Dominican, Colombian, and Brazilian tobaccos entering consumption channels totaled about 13 million pounds; the percentage decreases from the like period of a year earlier for these tobaccos were 48, 37, and 35 percent, respectively. Also, sharply less Indonesian and Argentine tobaccos entered consumption channels, but imports of Mexican and Honduran tobaccos were up more than a fourth and more than a third, respectively. Similarly, imports for consumption of Paraguayan tobacco increased sharply and Jamaican tobacco increased some. During October 1965-March 1966, use of Cuban tobacco from the steadily diminishing stocks in this country was about 2.7 million pounds (farm-sales weight equivalent)--moderately less than in the same period a year earlier.

Binder: The 1965-66 disappearance of Connecticut Valley binder tobacco is estimated at about $6\frac{1}{4}$ million pounds--roughly 1 million less than 1964-65, and a new low. During the first 7 months of the current marketing year, exports were slightly ahead of those in the same period of 1964-65. The major outlet was Spain with West Germany the next ranking destination. Domestic use appears likely to be down some from 1964-65.

The 1965-66 disappearance of Wisconsin tobacco is estimated at $19\frac{1}{2}$ million pounds--up approximately $1\frac{1}{2}$ million from the long-time low in 1964-65. The rise appears likely in domestic use; exports during the first 7 months of the 1965-66 marketing year were sharply below a year earlier when East Germany took a sizable shipment.

Wrapper: The July 1965-June 1966 disappearance of Connecticut Valley cigar wrapper tobacco is estimated at about $12\frac{3}{4}$ million pounds--down a little from 1964-65. Domestic use may be $9\frac{1}{2}$ million pounds--about $\frac{1}{2}$ million lower than a year earlier, but exports may be over $3\frac{1}{4}$ million pounds, up some from a year earlier. During July 1965-April 1966, exports to West Germany--a leading outlet--were up a little and there were substantial relative increases to Britain and East Germany. Other destinations receiving more were Canary Islands, the Netherlands, and Finland. Moderately less went to Canada--a major outlet--and also less went to Spain, Switzerland, and Belgium.

1965	<u>3/</u>	.2	.9	.4	.6	3.2	5.3	
Total	0	.2	1.1	<u>4/</u>2.4	.6	3.5	<u>4/</u> 7.8	

1/ Negligible. 2/ Includes negligible amount from the 1962 crop of New York and Pennsylvania Havana Seed (type 53). 3/ Marketings not completed. 4/ Includes about 100,000 pounds of 1957 crop of type 52.

The 1965-66 disappearance of Georgia-Florida cigar wrapper tobacco is estimated at about $7\frac{3}{4}$ million pounds--down about $\frac{3}{4}$ million from 1964-65. Domestic use, at about 6 million pounds, is approximately $1\frac{1}{4}$ million below the unusually high 1964-65 figure; exports seem likely to be near $1\frac{3}{4}$ million pounds--up at least $\frac{1}{2}$ million from a year earlier. During July 1965-April 1966, exports to West Germany--the leading destination--and to East Germany--the next ranking destination--were sharply higher than a year earlier. Canada and Belgium also took more, but less went to Austria and the Netherlands. The Canary Islands received about the same quantity as in the like period of a year earlier.

Prices and Price Supports

The 1965 crop of Pennsylvania filler brought an average price of 24 cents per pound--3 cents less than the 1964 crop and third lowest in 8 years. The 1965 crop of Ohio filler brought an average price of 26.2 cents per pound-- $\frac{1}{2}$ cent below 1964 and lowest in 7 years. The average price of Connecticut Valley binder for 1965-crop tobacco was 47 cents--about 3 cents lower than a year earlier for Broadleaf but over 3 cents higher than a year earlier for Havana Seed. Southern Wisconsin tobacco brought an average of 29.7 cents-- $2\frac{1}{2}$ cents less than a year earlier, while the Northern Wisconsin average price was 28.9 cents--nearly 7 cents below the 1964 average which was second highest in 18 years. The effect of adverse growing and curing conditions on the quality of the crop was a factor in lowering the price.

For data on overall price support levels for the eligible types, see table 28. Pennsylvania filler (type 41) and cigar wrapper tobacco (types 61-62) do not receive price support.
